

Statement Regarding REACH and Rohs Regulation

Disposable Instrument is deeply committed both to the environment we all share and to our customers' needs for compliance to appropriate environmental regulations and directives. We have deeply examined these issues and have high confidence in our understanding of the requirements for compliance.

The majority of our products are composed of various stainless steel or aluminum alloys. While some of these materials contain small amounts of regulated materials, their content is completely in compliance, with European Union (EU) Directive 2011/65/EU (June 8, 2011), which defines restrictions on hazardous substances (RoHS).

With regard to European Union (EU) Directive 2011/65/EU (June 8, 2011) on the restriction of the use of certain hazardous substances in electrical and electronic equipment (RoHS), to the best of our knowledge and belief, Disposable Instrument, products are in compliance with the directive.
